Split type spindle guide for fuel valve

New split type spindle guide has been developed in order to prevent decrease of opening pressure and extend the life time and maintenance interval.

The tip of spindle guide made by special alloy metal is separated from spindle guide body and fixed by shrinkage, so as to prevent from deformation or wear.

This split type spindle guide has compatibility with the present type in complete.

Consequently, we recommend to use this spindle guide of brand-new type at the time of spindle guide replacement.
